

CARE ONCOLOGY CLINIC

The Care Oncology Clinic provides cancer treatments that may complement and enhance standard of care therapy. Treating your cancer in combination with your existing treatment may increase its effect. The medications are well understood, with low side effects, offering you an acceptable quality of life.

When treating cancer, standard cancer treatments alone may not be as effective as combination therapy and may have unacceptable side effects. The Care Oncology Clinic is a leading London cancer clinic, providing treatments that are well understood with low side effects, thereby offering an improved quality of life. The Care Oncology Clinic is staffed by a team of leading oncologists and doctors, who are currently offering this combination cancer treatment.

LOW SIDE EFFECTS AND AN ACCEPTABLE QUALITY OF LIFE

The Care Oncology Clinic provides existing treatments currently approved to treat other metabolic conditions which, when given together with your existing cancer treatment, can reduce the growth rate of cancer cells.

The Care Oncology Clinic uses a mixture of established tolerable prescription medicines to treat patients with cancer. These medicines target cholesterol, glucose and glycolysis processes, which impact upon the metabolism of the cancer cells and the immune cells surrounding the cancer cells.

In recent years, research has been undertaken to investigate the value of existing prescription medicines, including metformin (diabetes), statins (cholesterol) and antibiotics (infections) in treating cancer. Research has demonstrated the positive effects these individual drugs have on slowing down the rate of growth of cancer cells and tumours. The medicines prescribed have already been used by large numbers of people for long periods of time. This means that their side effects are well understood and easily managed.

The Care Oncology Clinic uses a combination of these established, tolerable medicines to treat patients with cancer, alongside their current standard of care. The Care Oncology Clinic's treatment is overseen by leading oncologists who will be with you every step of the way throughout your treatment.

THE PATIENT JOURNEY

What will happen at the Clinic?

- 1.** As a first step, the Clinic will need your doctor to share your medical data. This allows the Care Oncology Clinic's leading consultants to work alongside your current doctor in coordinating the best level of care.
- 2.** We will make your first visit to the Care Oncology Clinic as comfortable as possible, with dedicated and experienced staff on hand to answer all your questions.

Your first visit to the Clinic will include;

- Completion of a consent form
 - A meeting with a Consultant
 - An evaluation of your current condition
 - Diagnostics (if required)
 - A prescription for your cancer treatment
- 3.** Following your appointment with the Consultant, a nurse will talk you through your individual cancer treatment and answer any questions you may have.
 - 4.** You will still need to have routine scans and checkups to see how the treatments are affecting your cancer. These may be carried out by your doctor at your local hospital, or arranged for you by the Care Oncology Clinic.

PATIENT INFORMATION PACK

Eligible Patients

You could be eligible to attend the Care Oncology Clinic if you are a cancer patient with or without metastatic cancer.

The Care Oncology Clinic treatment may complement and enhance your existing treatment and may make your existing treatment effective again if it has become ineffective. For some patients, standard cancer treatments may not be desired, in which case the Clinic's treatment may be effective on its own.

Medicines used at the Clinic?

The medicines used at the clinic have all been previously shown to impact upon the energy sources used by cancer cells and to target specific pathways within those cells that will help to reduce the rate at which they grow. These medicines include metformin, statins and antibiotics.
